Professional Summary

Backend engineer with 5+ years building services in Java 17 and Python, on infrastructure that has to hold up at real scale. Day to day that means designing REST APIs and relational schemas, then wiring up the monitoring and alerting that surfaces trouble before a customer does. I like ambiguous requirements more than clean specs. Open to a Java-focused backend role where operational discipline matters as much as shipping new features.

Work Experience

Backend & Infrastructure Engineer

Aug 2025 – Aug 2026

Rhesis AI GmbH, Germany

- Contributing to Rhesis, an open-source GenAI testing platform used by 500+ organizations for automated AI quality validation.
- Built task management features across 10+ entity types in FastAPI, including entity modeling, REST APIs, and async notifications.
- Implemented a single reusable comment service that plugged into 6+ entity types, avoiding duplicate commenting logic being built per entity.
- Deployed a production observability stack covering 8 services, with alerts routed instantly to Discord and email.

Backend Engineer

Feb 2022 – Feb 2025

Mitigant GmbH, Germany

- Built a Cloud Attack Emulation SaaS platform with 50+ scenarios to assess AWS/Azure security, based on MITRE ATT&CK and ATLAS.
- Architected Java (Spring Boot) microservices using AWS/Azure SDKs for Security Chaos Engineering, provisioning isolated environments via AWS CloudFormation for automated attack simulations.
- Connected CloudTrail, GuardDuty, and Datadog for real-time monitoring and evidence collection across 75% of attack scenarios, giving customers verifiable proof of each attack's impact.
- Collaborated with frontend on APIs for dynamic attack-scenario configuration, enabling faster feature delivery.

Student Assistant

Jul 2021 – Feb 2022

Hasso Plattner Institute, Germany

- Built the frontend and backend of a research data visualization web app, used internally by a team of 10.
- Modeled and processed 5TB of political wiki data with Java and Gson, storing it in PostgreSQL for efficient querying.
- Implemented Redis caching, reducing database load 40%.

Full-stack Engineer

Dec 2017 – May 2021

BRAC University, Bangladesh

- Built features for a University Student Information System (admission, advising, accounts, grades) serving 20,000+ students.
- Optimized backend performance via HikariCP tuning, indexing, and Redis caching, improving response times 30%.
- Built an audit trail system with Spring Security to track access to sensitive data across 20,000+ student records.

Education

Digital Health, Master of Science

Oct 2020 – Sep 2024

Hasso Plattner Institute, Germany

- Concentration: Software Architecture, Scalable Computing, and Cloud-Native Platforms
- Thesis: SUBEAT: A Framework and Toolbox to Enable Flexible N-of-1 Trials of Smartphone Usage Behavior

Computer Science and Engineering, Bachelor of Science

Dec 2011 – Apr 2016

Khulna University of Engineering & Technology, Bangladesh

- Concentration: Distributed Systems, Computer Networks, Operating Systems
- Thesis: Cancer Classification from DNA Microarray Data using mRMR and Artificial Neural Network

Technical Contributions

- Rhesis AI Blog. “Scoped access, managed secrets, self-healing deploys: our move to Kubernetes,” July 2026. [Link](#).

- Rhesis AI Blog. “Self-hosting Rhesis with Docker Compose,” November 2025. [Link](#).

IT Skills

Backend: Java, Spring Boot

Databases: PostgreSQL

Cloud & DevOps: AWS, Monitoring and Alerting
